Cooperation with us means full support from the initial idea of the working station room to the final on-site implementation. We offer concepts, layouts and complete architectural design. We prepare alternative quotations, help in selecting the best option, on-time manufacturing, assembly and aftersales support.

Comprehensive construction of control rooms

Taking into account the experience gained so far from various industries, ZPAS meets the challenges faced by our customers, implementing a comprehensive range of control centres – control rooms, both for power generators and suppliers, as well as for chemical, gas, water, coking plants, coal mines, railway interlocking stations and other industrial and economic sectors.

Comprehensive control room implementation may include:

- construction works (architecture and interior design),
- sanitary installations – air-conditioning (including precision air-conditioning), ventilation and heating,
- visualisation systems – matrix boards, graphic walls (video-screens),
- dispatch desks including electrical and teletechnical equipment,
- primary and backed-up power supply systems,
- general, emergency and evacuation lighting systems,
- teletechnical system (access control, LAN, CCTV, fibre optic network),
- structured cabling systems,
- fire protection systems,
- server room equipment.

ZPAS is able to build all the components of a modern dispatch centre – from concept (proposals of solutions including visualizations), through basic and detailed designs (including all approvals and permits) up to implementation.
